

# Guidelines for the preparation of a PhD Symposium paper in LaTeX

Tom Maertens

Supervisor(s): Thomas Demoor, Wouter Rogiest

## I. INTRODUCTION

Remember that the paper must not exceed one *double-column* A5-sized page. The column width is approximately 59 mm and the default font size is 9 points. The easiest way to generate your paper using  $\text{\LaTeX}$  is to edit the template you find at the website. Note that since the paper should be as small as one A5 page, there should be no abstract. The paper should start with the section *Introduction*, which should indicate the perspective of the investigated problem as well as a clear discussion of the goals to be achieved. Next, a motivated choice of the applied methods and the description of the performed research itself should be provided. To make the story complete, the paper should end with some clear conclusions.

## II. HOW TO USE THE STYLE FILES

### A. General Information

The style file has to be selected with a command of the form

```
\documentclass[twocolumn]
{phdsymp}
```

while the bibliography style file has to be selected with a command of the form

```
\bibliographystyle{phdsymp}
```

The symposium proceedings will not include the author affiliation below or beside the name(s) of the author(s); instead, use the command `\thanks{...}` in the title to mention the name of your department.

T. Maertens is with ...

### B. Additional Changes

Caption of tables should be defined before the table (see Table 1), caption of figures after the figure (see Figure 1).

Table 1. The caption comes before the table.

	title page	odd page
onesided	leftTEXT	leftTEXT
twosided	leftTEXT	rightTEXT

Figure 1. The caption comes after the figure.

## III. SUBMISSION

The paper should be submitted as a pdf file.

## IV. CONCLUSIONS

This guideline has been prepared by using the style file `phdsymp.cls`. The template can be used to prepare a paper for submission to the PhD Symposium.

## ACKNOWLEDGMENTS

The authors would like to acknowledge the suggestions of many people.
