

BibT_EX styles catalogue for L_YX

Preface

This catalogue groups the BibT_EX styles by their main characteristics; styles are presented in reverse date order within each group, with undated styles at the end of each group. The appendices list the various styles that can be used with L^AT_EX rather than L_YX and also those styles which, not being intended for use with specific L^AT_EX packages, did not work under L_YX 1.6.3.

Note that some styles will work both with or without natbib but natbib has been listed only where it is essential. Also there are numerous detailed differences between styles in the same group; this catalogue only covers the main ones but has been produced in the hope that it will enable people to narrow their searches for specific styles.

A \LaTeX utility styles

A.1 Adrconv

Adrconv is a collection of Bib \TeX style files to turn an address database stored in the .bib format into files suitable for printing as address books or included into letter classes like akletter or scrletter2. Adrconv will sort the data either by name or birthday and create output files in various formats for address books or time planers. (The \TeX Catalogue Online)

C.1 Babelbib

This package enables to generate multilingual bibliographies in cooperation with babel. Two approaches are possible: Each citation may be written in another language, or the whole bibliography can be typeset in a language chosen by the user. In addition, the package supports commands to change the typography of the bibliographies. (The T_EX Catalogue Online)
